**Subject:** MII Phone Support

**Keywords:** MII, M-II, Flashcam, Software setup, Software

**Article:**

### **Purpose & Scope**

---

M-II Software Installation Procedure

### **Procedure**

---

Insert M-II Flashcam Software disk.

Click Install M-II Manager, after install is complete select Yes, I want to restart my computer now, then click Finish.

After your computer reboots, reopen the M-II Software disk, click Install Camera Driver. After it finishes if it asks you to restart your computer do so now.

Now connect power to your M-II's charger cup/docking station. Also connect the USB cable to the docking station and then connect other side to the port on your computer or laptop. Now slide the M-II Flashcam into the docking station. If the green square on the docking station doesn't light up press it to do so.

The Found New Hardware wizard screen should appear. Select Do Not scan for a Windows Update at this time, then click Next. Now click Install Software Automatically, then click Next. Shortly after you will be prompted again, click Continue Anyway. Click Finish after this completes. The Found New Hardware wizard will appear one more time. Please follow the same instructions used the first time the Found New Hardware appeared.

Your M-II Flashcam Software is now installed and ready for operation.

### **Additional Comments**

---

You must always use the same USB port on your computer/laptop that you used when installing the M-II Flashcam software. If using a different USB port your computer/laptop you must reinstall the drivers again. You must also be an administrator on the machine in order to install the drivers and software.
